

After starting only 6 years ago Carrs Windows in Gargrave Skipton install a Soukup Crafter CNC machining centre

Carrs Windows Ltd are a replacement window and door company based in Skipton, supplying Upvc, Timber & Aluminium products to the Ilkley, Settle, Grassington & North Yorkshire Areas

Carrs Windows of Gargrave Skipton first viewed the Soukup CNC Window Machining Centre Model Crafter at W12 Woodworking Show at the NEC Birmingham and knew that the machine was the ideal machine for their growing Timber Window & Door Business Manufacturing Casement Windows & Doors plus Traditional Box Sliding Sash Windows in North Yorkshire.

In 2014 they visited the W14 Show and again was very impressed with the Soukup CNC Crafter of which nothing they saw at the show as other Window Machines are very much for Manufacturing European Windows and Doors and could not help their growing joinery business.

The Soukup CNC Crafter is Unique and dedicated to Manufacturing UK Windows and Doors with its capability to machine large and small components easily plus supplied with its own Soukup Wincreator Software means you can input your order data from your office directly to the machine, produces a cutting list and pictorial worklist on the Machines 12 inch Touch Screen for the operator manufacturing UK Style Timber Window and Doors effortlessly as easy as A,B,C , another plus the machine takes very little floor space 2mx 2m which means it will fit into most small joinery workshops and as such was ideal for Carrs Windows workshop which is 1500 sq ft.

In 2016 they visited the W16 Exhibition and saw the machine in action again producing UK Style Casement Windows & Doors plus the Box Sliding Windows manufacturing the Horn Section, and Including Machining all the Box Components for Spring Balances and Traditional Pulleys & Weights, Trenching the Cill and Head, Moulding the Cill Section, Producing Beading all on one machine "A great piece of machinery that's not only incredibly accurate but quick too" was Mr Marc Carr comments during discussions with Ian Brown of IWM and Mr Jaroslav Soukup. Compared to the way we made our Windows and Doors, manually on traditional machines i.e. Old Fashioned Traditional Machining Methods on a Spindle Moulder with manual setup Tenon and Profile Tooling

plus the Mortising all very Slow Labour Intensive Processing and we would be lucky if we made on average 25 windows a week and with 3 men.

Since the Soukup Crafter complete with Soukup Designed Tooling was Delivered Installed and Commissioned in May 2017 by Soukup Engineers in our Workshop. "We can easily make 50 completed windows a week, with more men behind the machine we would be able to produce up to and possibly over a hundred easily!" Commented Mr Carr. Mr Marc Carr also posted

on their Facebook Page since installation Fantastic few days spent getting to grips with our incredible new SOUKUP Woodworking Machinery!

Plus see on You Tube Mr Marc Carr Producing the Sliding Sash Boxes on the Machine and manufacturing all the Beading as following Titles:
